

ADDITIONAL NOTES ON THE ERIOCAULACEAE. LIX

Harold N. Moldenke

ERIOCAULON QUINQUANGULARE L.

Additional & emended synonymy: Gramen indicum capitulis tomentosum P. Herm., Mus. Zeyl., ed. 1, 17. 1717. Kokmotha P. Herm., Mus. Zeyl., ed. 2, 57. 1726. Eriocolon quinquangulare L. apud Lam., Encycl. Méth. Bot. 3: 275, in obs. 1789. Eriocaulon quinqueangulare L. ex Prain, Bengal Pl., imp. 1, 1127. 1903.

Additional bibliography: P. Herm., Mus. Zeyl., ed. 2, 57. 1726; Bojer, Hort. Maurit. 361. 1837; J. Grah., Cat. Pl. Bomb. 230. 1839; Prain, Bengal Pl., imp. 1, 1127. 1903; Cooke, Fl. Presid. Bombay, ed. 1, 2: 842 & 849 (1908) and ed. 2, imp. 1, 3: 354 & 361—362. 1958; Prain, Bengal Pl., imp. 2, 2: 848, 849, & 985. 1963; Punt, Reg. Veget. 36: 9. 1964; Cooke, Fl. Presid. Bombay, ed. 2, imp. 2, 3: 354 & 361—362. 1967; Malhotra & Moorthy, Bull. Bot. Surv. India 13: 314. 1971; Moldenke, Phytologia 29: 200, 205, 220—222, 224, 231, & 237 (1974) and 31: 397, 398, & 400. 1975; Anon., Taxon 24: 173. 1975; Moldenke, Phytologia 32: 496. 1976.

Malhotra & Moorthy (1971) cite for this species their nos. 107197 & 122668. Cooke (1908) cites only Jacquemont 742 and Stocks s.n. from Bombay and gives the overall distribution of the species as "Throughout India; Ceylon". Kuntze (1891) records it from Annam. Townsend describes the plant as "very abundant, heads pure white" and found it growing in damp sand in the troughs of undulations in an undulating area of white sand. Cooray also refers to the flowers as white and the plant as common; his nos. 70020104R, 70020245R, & 70032207R are vouchers for ecologic observations in Sri Lanka.

The Santapau collections cited below were previously cited by me as E. infirmum Steud., but they seem better placed as E. quinquangulare. Santapau encountered the species "in large patches in ricefields", while Jayasuriya refers to it as "abundant in wet places on savannas" at low altitudes and found it flowering in May.

The "E. quinquangulare Bojer" listed in the "Index Kewensis" and elsewhere and referred to Bojer, Hort. Maurit. 361 (1837) is actually not proposed there as a new species. The reference reads: "1. QUINQUANGULARE. L. Spreng. Syst. p. 775. Pat. Inde orientale, île Maurice. Croît dans les endroits découverts et humides autour du Grand-Bassin. Annuelle. Fl. Octobre, Décembre." The only other species which he lists is "2. REPENS. Lamk. Spreng. Syst. ibid. Pat. Ile Maurice. Croît et fleurit comme l'espèce précédente." Eriocaulon repens Lam., however, is native to Hispaniola (in the West Indies), not Mauritius, so both identi-

fications are apparently incorrect. To which of the five species known from Mauritius these two references apply can only be determined by examination of Bojer's actual specimens probably preserved in the Paris herbarium.

Additional citations: INDIA: Gujarat: Santapau 9611 (N, Xa), 9630 (N, Xa). Maharashtra: Vartak RD.17 (Ac). Mysore: Bogner 521 (Mu). SRI LANKA: Cooray 7002010LR (W-2657056), 70020245R (W-2657055), 70032207R (W-2657054); Jayasuriya 1948 (Ld); Moldenke, Moldenke, & Jayasuriya 28217 (W-2765405), 28225 (W-2765404), 28322 (W-2765410); Moldenke, Moldenke, & Sumithraarachchi 28199 (W-2765406); Moldenke, Moldenke, Sumithraarachchi, & Waas 28319 (W-2765412); C. C. Townsend 73/261 (W-2765874).

ERIOCAULON QUINQUANGULARE var. ELATIUS Moldenke

Additional bibliography: Moldenke, Phytologia 29: 222. 1974.

Jayasuriya found this variety "abundant in wet sandy grassy spots" at low altitudes, the white heads in flower in May.

Additional citations: SRI LANKA: Jayasuriya 2005 (Ld).

ERIOCAULON RECURVIFOLIUM C. H. Wright

Additional bibliography: Fedde & Schust. in Just, Bot. Jahressber. 47 (2): 12. 1926; Moldenke, Phytologia 24: 496. 1972.

ERIOCAULON RITCHIEANUM Ruhl.

Additional synonymy: Eriocaulon ritcheanum Ruhl. apud Saxena, Bull. Bot. Surv. India 12: 38 & 62. 1970.

Additional bibliography: Cooke, Fl. Presid. Bombay, ed. 1, 2: 850 (1908), ed. 2, imp. 1, 3: 362-363 (1958), and ed. 2, imp. 2, 3: 362-363. 1967; Saxena, Bull. Bot. Surv. India 12: 38 & 62. 1970; Kulkarni & Desai, Journ. Bombay Nat. Hist. Soc. 71: 82-84. 1974; Moldenke, Phytologia 29: 222-223 (1974) and 31: 397. 1975; Shah, Biol. Abstr. 59: 6329. 1975; Moldenke, Phytologia 32: 498. 1976.

Cooke (1908) cites only Ritchie 1248 from Bombay -- Belgaum, S. M. Country -- in the Hervier Boissier at Geneva and comments that "I have seen no specimens; there are none in Herb. Kew." Saxena (1970) tells us that this species comprises part of "poor aquatic vegetation", found only in ditches or where stream flow is slow.

Material of E. ritchieanum has been misidentified and distributed in some herbaria as "E. longicuspis Hook. f."

Additional citations: INDIA: Maharashtra: Vartak RD.13 (Ac), RD.15 (Ac), RD.18 (Z).

ERIOCAULON ROBUSTO-BROWNIANUM Ruhl.

Additional bibliography: Cooke, Fl. Presid. Bombay, ed. 1, 2: 850-851 (1908), ed. 2, imp. 1, 3: 363 (1958), and ed. 2, imp. 2, 3: 363. 1967; Moldenke, Phytologia 29: 223. 1974.

Cooke (1908) says for this species: "Kanara: Dharwar and Bellary district (Saw. according to Ruhland, but probably a misprint

for Law). I have seen no specimens; there are none in Herb. Kew." Additional citations: INDIA: Maharashtra: Vartak RD.20 (Ld.).

ERIOCAULON ROUXIANUM Steud.

Additional bibliography: Cooke, Fl. Presid. Bombay, ed. 1, 2: 851 (1908), ed. 2, imp. 1, 3: 363 (1958), and ed. 2, imp. 2, 3: 363. 1967; Moldenke, Phytologia 25: 69. 1972.

Cooke (1908) comments that "Dalzell, who has collected and described many of the Bombay Eriocaulons, has seen neither this plant nor E. heterolepis. There are no specimens in Herb. Kew. Roux's specimens, collected in Bombay in 1832, are said to be in Delessert's Herbarium (Lasegue, in Deless. Mus. Bot. (1845) p. 156)." That herbarium is in the Conservatoire et Jardin Botaniques in Geneva now.

ERIOCAULON SACCATUM Van Royen

Additional bibliography: Moldenke, Phytologia 25: 70. 1972; Hartley, Dumstone, Fitzgerald, Johns, & Lamberton, Lloydia 36: 235. 1973; Farnsworth, Pharmacog. Titles 9 (1): x. 1974.

Hartley and his associates (1973) found this plant growing in moist meadows in New Guinea and cite their no. 13235.

ERIOCAULON SCARIOSUM J. E. Sm.

Additional bibliography: Heslop-Harrison, Ind. Kew. Suppl. 15: 52. 1974; Moldenke, Phytologia 29: 223 (1974) and 31: 391. 1975.

Recent collectors describe this plant as an erect ephemeral herb, 15 cm. tall, with basal leaves and "stems" [-peduncles] 5 inches long, the inflorescences "papery-white". Nelson found it to be "common in mud in low-lying swamp in creek bed", while Latz says that it is "rare in sand on edge of seasonal swamps". Parker refers to it as growing in clumps in moist disturbed sand areas. It has been collected in flower and fruit in June and September.

Additional citations: AUSTRALIA: Northern Territory: D. J. Nelson 1172 [Herb. North. Terr. 11304] (Z); M. Parker 135 (Ld.). AUSTRALIAN ISLANDS: Wessel: Latz 3312 [Herb. North. Terr. 36834] (Z).

ERIOCAULON SCHIEDEANUM Körn.

Additional bibliography: Moldenke, Phytologia 26: 36 (1973), 31: 378 (1975), and 32: 492. 1976.

Rzedowski & McVaugh describe this plant as having "cabezuelas negruzcas, los individuos creciendo aislados in zona pantanosa a los lados de un arroyo", at 2700 meters altitude, flowering and fruiting in October.

The Pringle 3855, distributed in many herbaria as E. schiedeanum, actually is E. bilobatum Morong, while Gentle 993 is E. fuliginosum C. Wright.

Additional citations: MEXICO: Aguascalientes: Rzedowski & McVaugh 824 (Mi). Jalisco: Pringle 6146, in part (W-254714, W-937180).

ERIOCAULON SCHULTZII Benth.

Additional bibliography: Moldenke, Phytologia 25: 71. 1972.

Dunlop refers to this plant as an "annual in organic sludge" and found it growing in a rock-hole in sandstone conglomerate, flowering and fruiting in February.

Additional citations: AUSTRALIA: Northern Territory: C. Dunlop 3388 (Z).

ERIOCAULON SCLEROCEPHALUM Ruhl.

Additional bibliography: Moldenke, Phytologia 25: 71-72. 1972; León & Alain, Fl. Cuba, imp. 2, 1: 281 & 423. 1974; Moldenke, Phytologia 32: 504. 1976.

Recent collectors have encountered this plant on savannas, especially on white quartzite sand where water seeps through, and along moist sandy roadsides, flowering and fruiting (in addition to the months previously reported by me) in March and April.

Material has been misidentified and distributed in some herbaria as E. sigmaeum C. Wright. Killip 44059 is a mixture with E. ovoideum Britton & Small.

Additional citations: CUBA: Pinar del Río: Ekman 10822 (W-1302885—cotype). ISLA DE PINOS: Britton, Britton, & Wilson 14948 (W-793220); Ekman 11990 (W-1302886—cotype), 12106 (W-130288); Killip 43036 (W-2112028), 44059, in part (W-2176133), 45517 (W-2226329).

ERIOCAULON SEDGWICKII Fyson

Additional bibliography: Moldenke, Phytologia 29: 224. 1974.

Vartak encountered this plant on moist soil, flowering and fruiting in September.

Additional citations: INDIA: Maharashtra: Vartak RD.2 (Z), RD.21 (Ld), RD.22 (Z).

ERIOCAULON SEEMANNII Moldenke

Additional bibliography: Moldenke, Phytologia 29: 224. 1974; Molina R., Ceiba 19: 24. 1975.

Molina R. (1975) records this species from Honduras.

ERIOCAULON SELLOWIANUM Kunth

Additional synonymy: Eriocailon sellowianum Moldenke, Phytologia 29: 225, sphalm. 1974.

Additional bibliography: Moldenke, Phytologia 29: 224-225 & 31 (1974) and 31: 397. 1975.

Recent collectors have encountered this plant on wet campos and in "brejo, zona de campo", at altitudes of 1300-1500 meters, fruiting in May.

Additional citations: BRAZIL: Goiás: W. R. Anderson 6466 (N); Hatschbach 36848 (Ld); Hatschbach, Anderson, Barneby, & Gates 36317 (Ac); Irwin & Soderstrom 7643 (W-2759065).

ERIOCAULON SELLOWIANUM var. LONGIFOLIUM Moldenke

Additional bibliography: Moldenke, Phytologia 29: 225. 1974.

Hatschbach encountered this plant in "campo, margem cerrado", flowering and fruiting in May.

Additional citations: BRAZIL: Goiás: Hatschbach 36829 (Ld).

ERIOCAULON SELLOWIANUM var. MINOR Moldenke

Synonymy: Eriocailon sellowianum var. minor Moldenke, Phytologia 29: 225, sphalm. 1974.

Additional bibliography: Moldenke, Phytologia 29: 225 (1974) and 31: 397. 1975.

ERIOCAULON SELLOWIANUM var. PARANENSE (Moldenke) Moldenke & Smith

Additional bibliography: Moldenke, Phytologia 29: 224 & 225 (1974) and 31: 397. 1975.

Additional citations: BRAZIL: Paraná: Hatschbach 35636 (Ld).

ERIOCAULON SETACEUM L.

Additional synonymy: Tajeru-cotsjiletti-pullo Rheed apud Lam., Encycl. Méth. Bot. 3: 275, in syn. 1789. Randiala malabarica, capillaceo folio Petiv. apud Lam., Encycl. Méth. Bot. 3: 275, in syn. 1789. Eriocaulon setaccum L. ex Moldenke, Phytologia 31: 397, in syn. 1975.

Additional bibliography: Lam., Encycl. Méth. Bot. 3: 275. 1789; J. Grah., Cat. Pl. Bomb. 230. 1839; Woodr., Journ. Bomb. Nat. 13: 429. 1901; Cooke, Fl. Presid. Bombay, ed. 1, 2: 841--843. 1908; Dunn & Tutcher, Kew Bull. Misc. Inf. Addit. Ser. 10: 291 & 292. 1912; Cooke, Fl. Presid. Bombay, ed. 2, imp. 1, 3: 353-355 (1958) and ed. 2, imp. 2, 3: 353-355. 1967; Lieth, Phenol. & Season. Model. 439. 1974; Moldenke, Phytologia 29: 284 (1974), 31: 397 (1975), 32: 465 & 470 (1975), and 32: 492. 1976.

Cooke (1908) cites Dalzell s.n., Stocks s.n., and Woodrow s.n. from Bombay and gives the overall distribution of the species as "India (Bengal, Khasia Hills, Birma, W. Peninsula); Ceylon, Cochinchina". He comments that "I have followed Ruhland....in making E. Capillus-naiadis, Hook. f., conspecific with E. setaceum, Linn. In the 'Flora of British India'....E. Capillus-naiadis, Hook. f., is made conspecific with E. setaceum of Koernicke, which is certainly that of Linnaeus. Ruhland restores E. intermediate, Koern., which is the E. setaceum of many authors, but not of Linnaeus."

Malaisse (1974) reports that in Zambezia E. setaceum flowers in May, while the very similar E. bifistulosum Van Heurck & Muell.-Arg. flowers in February and March. Taylor states that in western Australia he found E. setaceum "to 22 cm. tall, grey nodular flowers protruding above water line" in May, while Dunlop, in the northern part of the continent, refers to it as an aquatic, rooting in mud in 30 cm. of water at the edge of a freshwater lagoon, only the inflorescence being aerial, flowering in February.

Lamarck (1789) calls this plant, in French, "joncinelle sétacée" and describes it as follows: "La racine de cette plante

est longue, & garnie de fibres; elle pousse à son collet quantité de feuilles sétacées. entre lesquelles s'élèvent plusieurs tiges ou hampes menues, à six angles selon Linné, enveloppées chacune inférieurement par une gaine membraneuse. Chaque tige est terminée par une petite tête arrondie. Cette plante croît dans l'Inde, aux lieux aquatiques."

The Hu 10873, distributed as E. setaceum, seems, rather, to be E. fluviatile Trimen, while Wingfield 594 is E. bifistulosum Van Heurck & Muell.-Arg. and Hu 8906 is E. cristatum var. brevicalyx C. H. Wright.

Additional citations: INDIA: Maharashtra: Vartak RD.23 (Ld). AUSTRALIA: Northern Territory: C. Dunlop 3283 (Ld). Western Australia: G. C. Taylor 91 (Z).

ERIOCAULON SETACEUM var. **CAPILLUS-NAIADIS** (Hook. f.) Moldenke

Additional & emended bibliography: Prain, Bengal Pl., imp. 2, 2: 848 & 985. 1963; Moldenke, Phytologia 29: 221 & 226—229. 1974.

ERIOCAULON SEXANGULARE L.

Additional & emended bibliography: J. Grah., Cat. Pl. Bomb. 231. 1839; Schnitzl., Iconogr. 1: pl. 46, fig. 6. 1845; Woodr., Journ. Bomb. Nat. 13: 429. 1901; Cooke, Fl. Presid. Bombay, ed. 1, 2: 842 & 847. 1908; Dunn & Tutcher, Kew Bull. Misc. Inf. Addit. Ser. 10: 291 & 292. 1912; M. R. Henderson, Malay. Wild Fls. Monocot., imp. 1, 212, fig. 127. 1954; Pételet, Pl. Méd. Camb. Laos & Viet. 3: 267 (1954) and 4: 10, 49, 58, 113, 208, 209, & 295. 1954; Cooke, Fl. Presid. Bombay, ed. 2, imp. 1, 3: 354 & 359 (1958) and ed. 2, imp. 2, 3: 354 & 359. 1967; M. R. Henderson, Malay. Wild Fls. Monocot., imp. 2, 212, fig. 127. 1974; Heslop-Harrison, Ind. Kew. Suppl. 15: 51. 1974; Moldenke, Phytologia 29: 284, 285, & 390 (1974), 30: 259 (1975), 31: 390 (1975), and 32: 500. 1976.

Additional & emended illustrations: Schnitzl., Iconogr. 1: pl. 46, fig. 6. 1845; M. R. Henderson, Malay. Wild Fls. Monocot., imp. 1, 212, fig. 127 (1954) and imp. 2, 212, fig. 127. 1974.

Cooke (1908) cites Dalzell s.n., Stocks s.n., and two Woodrow s.n. collections, all from Bombay, where he says the species blooms in September. He gives the overall distribution of the species as "India (W. Peninsula); Ceylon, Tropical Asia, Madagascar".

Henderson (1974) records the common names "Asiatic pipewort" and "rumput butang" from Malaya and speaks of the plant as "Common in the lowlands in open wet places, ditches, ricefields, etc." Hu encountered it also in "wet places" in Hong Kong. My wife and I found it in the water of flooded marshlands in Sri Lanka. Kuntze (1891) records the species from Singapore.

The Jayasuriya 1520, distributed as E. sexangulare, is a mixture of this and of the type collection of E. longicuspe var. zeylanicum Moldenke.

Additional citations: INDIA: Maharashtra: Vartak RD.24 (Ac). SRI LANKA: Bogner 473 (Mu), 569 (Mu); Moldenke, Moldenke, Sumithraarachchi, & Waas 28316 (W-2765414). HONG KONG: S. Y. Hu 11071

(W-2732410). THAILAND: Bogner 416 (Mu).

ERIOCAULON SIGMOIDEUM C. Wright

Additional bibliography: León & Alain, Fl. Cuba, imp. 2, 1: 280 & 423. 1974; Moldenke, Phytologia 29: 285 (1974) and 31: 397. 1975.

The label on what I take to be Charles Wright's no. 3737 in the United States National Herbarium bears no number, but it seems quite definite that the specimen is part of his 3737 collection.

The Britton, Britton, & Wilson 14948, distributed as E. sigmoideum, is actually E. sclerocephalum Ruhl.

Additional citations: CUBA: Pinar del Rio: C. Wright 3737 (W-937194—isotype).

ERIOCAULON SOLLYANUM Royle

Additional & emended bibliography: Woodr., Journ. Bomb. Nat. 13: 429. 1901; Cooke, Fl. Presid. Bombay, ed. 1, 2: 842 & 848—849 (1908) and ed. 2, imp. 1, 3: 354 & 361. 1958; Prain, Bengal Pl., imp. 2, 2: 848, 849, & 985. 1963; Cooke, Fl. Presid. Bombay, ed. 2, imp. 2, 3: 354 & 361. 1967; Moldenke, Phytologia 29: 200, 205, & 230 (1974) and 31: 389. 1975.

Cooke (1908) cites Dalzell s.n., Law s.n., and Stocks s.n. from Bombay and Stocks s.n. from Sind, giving the overall distribution of the species as "Throughout India". He comments that it "Seems scarcely to differ from E. infaustum, N. E. Brown, in Dyer, Fl. Trop. Africa, v. 8 (1903) p. 253." Kuntze (1891) records it from Java.

ERIOCAULON SPECTABILE F. Muell.

Additional bibliography: Moldenke, Phytologia 25: 77 (1972) and 31: 391. 1975.

Dunlop found this plant growing in gravelly soil of a damp creek bed, flowering in July.

Additional citations: AUSTRALIAN ISLANDS: Maria: C. R. Dunlop 2810 [Herb. North. Terr. 36295] (Z).

ERIOCAULON SPRUCEANUM Körn.

Additional bibliography: Moldenke, Phytologia 26: 39 (1973) and 31: 381. 1975.

Pinto E. & Sastre encountered this species "en lugar húmedo, al lado de un morichal", at 180 meters altitude, flowering in March, the flowers said to be white.

Additional citations: COLOMBIA: Vichada: Pinto E. & Sastre 1439 (W-2748155).

ERIOCAULON SPRUCEANUM f. VIVIPARUM Moldenke

Additional bibliography: Moldenke, Phytologia 25: 78. 1972.

The Eitens refer to this as a plant growing with its base in water at brooksides, rooted in brown sand "in light shade of narrow gallery scrub", describe the flower-heads as white, and found

it in flower and fruit in September.

Additional citations: BRAZIL: Mato Grosso: Eiten & Eiten 8625. (W-2757750).

ERIOCAULON STELLULIATUM Körn.

Additional bibliography: Woodr., Journ. Bomb. Nat. 13: 429. 1901; Cooke, Fl. Presid. Bombay, ed. 1, 2: 842 & 846 (1908), ed. 2, imp. 1, 3: 354 & 358 (1958), and ed. 2, imp. 2, 3: 354 & 358. 1967; Moldenke, Phytologia 29: 221 & 231. 1974.

Cooke (1908) cites Stocks s.n. and Talbot 1598 from Bombay, where he says it blooms in February. He gives its overall distribution as "India (W. Peninsula)" only.

Additional citations: INDIA: Maharashtra: Vartak RD.25 (Ld.).

ERIOCAULON STENOPHYLLUM R. E. Fries

Additional bibliography: Wangerin in Just, Bot. Jahresber. 46 (1): 402. 1925; Fedde in Just, Bot. Jahresber. 46 (2): 596. 1929; Moldenke, Phytologia 26: 40. 1973.

ERIOCAULON STEYERMARKII Moldenke

Additional bibliography: Moldenke, Phytologia 29: 231 (1974) and 31: 384. 1975.

Bogner reports this plant as having its leaves "mostly submerged".

Additional citations: VENEZUELA: Bolívar: Bogner 1057 (Mu.).

ERIOCAULON STEYERMARKII var. *BAHIENSE* Moldenke, Phytologia 31: 229. 1975.

Bibliography: Moldenke, Phytologia 21: 229 & 384. 1975.

Citations: BRAZIL: Bahia: Harley, Renvoize, Erskine, Brighton, & Pinheiro in Harley 16068 (Z-type).

ERIOCAULON STRAMINEUM Körn.

Additional bibliography: Moldenke, Phytologia 25: 79-80. 1972.

Additional citations: BRAZIL: Mato Grosso: Irwin, Souza, Grear, & Reis dos Santos 17428 (W-2759064).

ERIOCAULON STRIATUM Lam.

Additional bibliography: Heslop-Harrison, Ind. Kew. Suppl. 15: 52. 1974; Moldenke, Phytologia 29: 231. 1974.

ERIOCAULON SUBGLAUCUM Ruhl.

Additional bibliography: Moldenke, Phytologia 29: 232. 1974.

Additional citations: SRI LANKA: Moldenke, Moldenke, Jayasuriya, & Sumithraarachchi 28285 (W-2765382).

ERIOCAULON TENUIFOLIUM f. *VIVIPARUM* Moldenke, Phytologia 31: 360. 1975.

Bibliography: Moldenke, Phytologia 31: 360 & 384. 1975.

Citations: BRAZIL: Amazônas: Murça Pires, Cavalcante, Magnago,

& Silva 13980 [Murça Pires & al. 13975] (W-2740219-type).

ERIOCAULON TEPICANUM Moldenke

Additional bibliography: Moldenke, Phytologia 25: 82. 1972.

Collectors have found this plant in anthesis in January, February, and August.

Additional citations: MEXICO: Nayarit: Edw. Palmer 2029 (W-1491594-isotype); J. N. Rose 2105 (W-301007).

ERIOCAULON TEXENSE Körn.

ERIOCAULON TORTUOSUM F. Muell.

Additional bibliography: Moldenke, Phytologia 25: 83. 1972.

Nelson describes this plant as an erect herb to 6 inches tall, the leaves flaccid, forming a rosette at the base of the plant, the inflorescences small, gray, and globular, and found it to be "common in muddy channels", flowering and fruiting in June.

Additional citations: AUSTRALIA: Northern Territory: D. J. Nelson 1125 [Herb. North. Terr. 11257] (Z).

ERIOCAULON TRUNCATUM Hamilt.

Additional & emended bibliography: Diels, Fl. Cent.-China 236. 1902; Dunn & Dutcher, Kew Bull. Misc. Inf. Addit. Ser. 10: 291 & 292. 1912; M. R. Henderson, Malay. Wild Fls. Monocot., imp. 1, 212. 1954; Prain, Bengal Pl., imp. 2, 2: 848 & 985. 1963; Malhotra & Moorthy, Bull. Bot. Surv. India 13: 314. 1971; Hartley, Dunstone, Fitzgerald, Johns, & Lamberton, Lloydia 36: 235. 1973; Farnsworth, Pharmacog. Titles 9 (1): x. 1974; M. R. Henderson, Malay. Wild Fls. Monocot., imp. 2, 212. 1974; Moldenke, Phytologia 29: 284 & 285. 1974.

Hu says of this plant "bracts blackish, white-papillose, apex pointed; heads gray, 2-3 mm. in diameter" and found it growing in

a "puddle over rock" and "submerged in a pool edge", flowering and fruiting in October and November. Hartley and his associates (1973) encountered it in marshy lake beds and cite their no. 9679 from New Guinea. Malhotra & Moorthy (1971) cite their no. 109183. Henderson (1974) calls it the "shortleaved pipewort" in Malaya and reports that there it is "Common in the lowlands in open, damp places, paths, etc., often in damp, sandy places." Sumithraarachchi, in Sri Lanka, refers to the heads as brownish and found the plant growing along a roadside stream of water, flowering and fruiting in July.

Additional citations: SRI LANKA: Sumithraarachchi DBS 400 (Ac, Id, Z). HONG KONG: S. Y. Hu 5957 (W-2697302), 12457 (W-2730690).

ERIOCAULON TUBERIFERUM Kulkarni & Desai, Journ. Bombay Nat. Hist. Soc. 71: [80]-84, fig. 1-19. 1974.

Bibliography: Kulkarni & Desai, Journ. Bombay Nat. Hist. Soc. 67: 134-135, fig. 1-8 (1970) and 71: [80]-84, fig. 1-19. 1974; Moldenke, Phytologia 31: 389. 1975; Shah, Biol. Abstr. 59: 6329. 1975.

Illustrations: Kulkarni & Desai, Journ. Bombay Nat. Hist. Soc. 67: betw. 134 & 135, fig. 1-8 (1970) and 71: 81, fig. 1-19. 1974.

"The type of this species "was collected from Panhala (938 m. alt.), Kolhapur district, Maharashtra, [India], along the margins of puddles on 28th July 1968 and is deposited in National Herbarium, Calcutta under Kulkarni and Desai 537 and the Isotypes 538-540 are deposited in the Herbarium of the Shivaji University, Botany Department, Hohalpur.

"E. tuberiferum is closely related to E. ritchieanum Ruhl. and E. leucomelas Steud. From the former it differs in the transition of the anther colour from white in younger condition to blackish at maturity and in its distinct anisopetalous male flower, the largest petal of which projects beyond the receptacular bractlets giving fringed appearance to the head. From the latter species it differs in the petal characters of the male flowers and in having distinctly oblique mouth for the peduncular sheaths. It differs from all the species of Eriocaulon known so far in its tuberiferous habit.

"Members of this species are commonly seen along the margins of puddles at Panhala from July--September. They grow in association with Isoetes. The species has also been collected from Radhanagari (Kolhapur district) where it grows in similar habitat. Further intensive collections may reveal its presence in other areas of Dahanadri ranges enjoying similar ecological conditions.

"In spite of very close observations during the last three years, we have failed to collect fruiting specimens of this species from both the localities. It appears probable that the species mainly reproduces by tubers in nature.

"The Royal Botanic Gardens, Kew, when referred to, informed us that the specimens resembled E. leucomelas Steud. (E. mela-leucum Mart.) superficially, appearing to be distinct both in

foliage and flower and belonged to E. ritchieanum Ruhl. but with abnormal flowers possibly due to nematode attack. The structures referred to here as tubers were suspected by the authorities of Kew to be nematode cysts. However, later studies by us on the ontogeny and the germination of the tubers.....precluded the possibility of these being nematode cysts."

ERIOCAULON TUBIFLORUM Van Royen

Additional bibliography: Moldenke, Phytologia 25: 86. 1972; Hartley, Dunstone, Fitzgerald, Johns, & Lamberton, Lloydia 36: 235. 1973; Farnsworth, Pharmacog. Titles 9 (1): x. 1974.

Hartley and his associates (1973) found this plant "Forming cushions in secondary alpine meadow" in New Guinea and cite their no. 12896.

ERIOCAULON WALKERI Hook. f.

Additional bibliography: Moldenke, Phytologia 29: 221 & 237. 1974.

Jayasuriya encountered this species in wet sandy spots, flowering in May.

Hutchinson, Fam. Flow.

Pl., ed. 1, 2: 67 & 339 (1934) and ed. 2, 2: 576 & 772. 1959;
 Dalla Torre & Harms, Gen. Siphonog., imp. 2, 53. 1963; H. P. Riley,
 Fam. Flow. Pl. S. Afr. 199 & 263. 1963; Gibbs, Chemotax. Flow. Pl.
 3: 1884. 1974; Moldenke, Phytologia 29: 291—293 & 509 (1974) and
 32: 497 & 510. 1976.

The Lecomte (1909) references in the bibliography above as often cited as "1908", but according to the "Index Kewensis" the latter portion of this volume was not published until 1909, even though the paper included were presented at meetings of the Society held in the latter months of 1908. On the other hand, Stapf (1931) gives "1906" as the proper date for the Pilger (1908) work, but the United States Library of Congress retains the 1908 title-page date as correct.

Gibbs (1974) reports that fructosans and raphides are absent in this genus.

It is worthy of note that Post & Kuntze, Lexicon 219 (1904), raised Eulepis, a section of Eriocaulon proposed by Bongard (1831) for species with "squamis capitulorum radiantibus", to generic rank, designating as type Eriocaulon prescottianum, the first-mentioned species in the section as listed by Bongard. Ruhland (1903) took the name over as a section of Syngonanthus for the other five species listed by Bongard: E. elegans, E. niveum, E. aciphyllum, E. nitidum, and E. anthemiflorum.

MESANTHEMUM ALBIDUM H. Lecomte, Bull. Soc. Bot. France 55: 601—602, fig. 2. 1909.

Additional & emended bibliography: H. Lecomte, Bull. Soc. Bot. France 55: 601—602, fig. 2. 1909; Moldenke, Phytologia 26: 467. 1973.

Emended illustrations: H. Lecomte, Bull. Soc. Bot. France 55: 602, fig. 2. 1909.

The Lecomte (1909) reference cited above is often cited as "1908" and was so cited by me in a previous publication. However, even though Lecomte's paper was read at the November 13, 1908, session of the Society, pages 589—756 of Volume 55 were not issued until 1909.

MESANTHEMUM AURATUM H. Lecomte, Bull. Soc. Bot. France 55: 599—602, fig. 1. 1909.

Additional & emended bibliography: H. Lecomte, Bull. Soc. Bot. France 55: 599—602, fig. 1. 1909; Moldenke, Phytologia 26: 467. 1973.

Emended illustrations: H. Lecomte, Bull. Soc. Bot. France 55: 600, fig. 1. 1909.

The Lecomte (1909) reference cited above is sometime cited as "1908" and was so cited by me in a previous publication. The pages in question, however, were not actually issued until 1909.

MESANTHEMUM ERICI-ROSENII T. Fries

Additional bibliography: Wangerin in Just, Bot. Jahresber. 46 (1): 402. 1925; Moldenke, Phytologia 26: 467. 1973.

MESANTHEMUM PRESCOTTIANUM (Bong.) Körn.

Additional & emended bibliography: Post & Kuntze, Lexicon 219. 1904; H. Lecomte, Bull. Soc. Bot. France 55: 598—599. 1909; Moldenke, Phytologia 29: 292. 1974.

As stated under M. albidum above, the Lecomte (1909) reference is sometime cited as "1908", but the pages involved were not actually issued until 1909.

MESANTHEMUM RADICANS (Benth.) Körn.

Emended synonymy: Eriocaulon giganteum Afzel. ex Körn., Linnæa 27: 573, in syn. 1856 [not E. giganteum Beauverd, 1909, nor (Beauverd) Beauverd, 1949, nor Mart., 1975, nor Riedel, 1959].

Additional & emended bibliography: Hook. f. & Benth. in Hook., Niger Fl. 547—548. 1849; H. Lecomte, Bull. Soc. Bot. France 55: 598. 1909; Moldenke, Phytologia 29: 292—293 (1974) and 32: 497. 1976.

As stated under M. albidum, the Lecomte (1909) reference is sometimes cited as "1908", but the pages involved were not actually issued until 1909.

Material of this taxon has been misidentified and distributed in some herbaria as Eriocaulon latifolium J. E. Sm.

Additional citations: NIGERIA: Dalziel 1112 (Mu). GABON: Bogner 1100 (Mu).

PAEPALANTHUS Mart.

Additional synonymy: Adelopus Hoffmigg. ex Moldenke, Résumé 227, in syn. 1959.

Additional & emended bibliography: Endl., Gen. Pl. 123. 1836; Bojer, Hort. Maurit. 361. 1837; Schnitzl., Iconogr. 1: pl. 46, fig. 8—12. 1845; Hook. f. & Benth. in Hook., Niger Fl. 548. 1849; Miq., Stirp. Surin. 221, pl. 65b. 1850; Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjøbenh. 23: [309]—315. 1871; V. A. Pouls., Vidensk. Meddel. Naturh. Foren. Kjøbenh. 40 [ser. 4, 9]: 223, 278, 292, 306, 313—321, 326—332, 336, & 341. 1888; Dalla Torre & Harms, Gen. Siphonog., imp. 1, 53. 1900; Post & Kuntze, Lexicon 8, 28, 102, 175, 188—189, 219, 223, 337, 412, 445, 466, 536, 560, 568, & 596. 1904; J. C. Willis, Man. & Dict. Flow. Abstr. 57: 3780. 1974; Moldenke, Phytologia 29: 281, 287, 293-330, 386-394, 477-503, 506, 507, & 510 (1974), 30: 15-62, 72-125, 251-280, 317-343, 507, 510, & 512 (1975), 31: 232, 379-383, 385, 387, 389, 392, 396-398, 403-406, & 408 (1975), and 32: 47 & 336. 1975; Moldenke, Biol. Abstr. 59: 6926 & 6934. 1975; Molina R., Ceiba 19: 24. 1975; Moldenke, Phytologia 32: 484, 485, 500, 505, 506, & 510, fig. 1. 1976.

The Endlicher reference cited above is often cited as "1836-1856", but the page involved here was actually issued in 1836. The Malme (1931) reference is sometimes erroneously given as "1903". Stapf (1931) gives "1906" as the date for the Pilger (1908) work, but the United States Library of Congress printed card retains the 1908 title-page date as correct.

The Bogner 1069, distributed as Paepalanthus sp., is actually Syngonanthus caulescens (Poir.) Ruhl.

PAEPALANTHUS ACANTHOPHYLLUS Ruhl.

Additional bibliography: Moldenke, Phytologia 29: 294, 296, & 306. 1974.

Recent collectors have encountered this plant on sandy campos, among rocks, and in "seasonal marsh of light-gray gleyed soil set in middle of cerrado woodland", flowering and fruiting in February and May.

The Glaziou 22319, cited below, is cited by Ruhland (1903) in his original description of P. speciosus var. glaber Ruhl.

Additional citations: BRAZIL: Distrito Federal: Taxonomy Class Univ. Bras. 68 (W-2757724, W-2757725). Goiás: Glaziou 22319 (Br, S); Hatschbach 36819 (Ld); Hatschbach, Anderson, Barneby, & Gates 36319 (Ac); Irwin, Harley, & Smith 32704 (W-2709880); Irwin, Reis dos Santos, Souza, & Fonseca 24649 (W-2582518A); Irwin, Souza, & Reis dos Santos 9400 (W-2758999).

PAEPALANTHUS ACTINOCEPHALOIDES Alv. Silv.

Additional bibliography: Moldenke, Phytologia 26: 46 (1973) and 30: 19. 1975.

Anderson and his associates found this plant in wet sand in an area of gently sloping open hillsides with sandy soil and sandstone boulders, mostly wet with seeping water, and rocky areas along a rushing stream at base of hill, flowering in February, and describe the flower-heads as white.

Additional citations: BRAZIL: Minas Gerais: Anderson, Stieber, & Kirkbride 35455 (Ub).

PAEPALANTHUS ACULEATUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahressber. 46 (2): 5. 1924; Moldenke, Phytologia 26: 187. 1973.

PAEPALANTHUS AEQUALIS (Vell.) J. F. Macbr.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenhavn. 23: 313. 1871; Moldenke, Phytologia 29: 294—295 & 491 (1974) and 30: 49 & 79. 1975.

Körnicke (1871) cites Lund s.n. from "In campis ad Mugi des Cruzes prov. S. Paulo, Novembri" and comments that "Pedunculi speciminum dense hirti vel brevibus hirto-pubescentes". Malme (1901), whose work is sometimes erroneously cited as "1903", cites Mosén 4450 and Regnell II.290 from Minas Gerais "inter saxa campi aridi", collected in September and December.

PAEPALANTHUS ALBO-VAGINATUS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 29: 295. 1974.

Recent collectors have found this plant in flower and fruit in December.

Additional citations: BRAZIL: Paraná: Reitz & Klein 17461 (N, W—2758203).

PAEPALANTHUS ALPINUS Körn.

Additional bibliography: Moldenke, Phytologia 29: 295. 1974.

Cleef has encountered this species on "pantano subpáramo con Blechnum loxense, Calamagrostis effusa, Baccharis revoluta y Espeletia killipii", "vertiente seco en el límite superior del subpáramo con Rhynchospora paramorum predominante, asociada con Calamagrostis effusa, Lycopodium contiguum, Arcytophyllum nitidum, Castratella piloselloides y Espeletia grandiflora", and "subpáramo: valle pequeño muy pantanoso con matorral de Diplostethium revolutum con Blechnum loxense, Chusquea y Sphagnum", and describes it as a "planta arrosetada" or "herba arrosetada común, flores blancas". He found it growing at altitudes of 3100—3660 m., flowering and fruiting in April, May, and July.

Additional citations: COLOMBIA: Cundinamarca: Cleef 3041 (Ld), 3701 (Ut—316659), 4905 (Ut—316637).

PAEPALANTHUS ALSINOIDES C. Wright

Additional bibliography: León & Alain, Fl. Cuba, imp. 2, 1: 283 & 428. 1974; Moldenke, Phytologia 29: 295 (1974), 30: 340 (1975), and 31: 403. 1975.

PAEPALANTHUS ALSINOIDES var. MINIMUS Jennings

Additional bibliography: León & Alain, Fl. Cuba, imp. 2, 1: 283 & 428. 1974; Moldenke, Phytologia 29: 295 (1974) and 30: 340. 1975.

PAEPALANTHUS AMOENUS (Bong.) Körn.

Additional bibliography: Moldenke, Phytologia 29: 294—296 &

306 (1974) and 31: 404. 1975.

The M. A. Chase 9221, distributed as and previously cited by me as P. amoenus, actually is P. urbanianus Ruhl.

PAEPALANTHUS ANDICOLA Körn.

Additional bibliography: Moldenke, Phytologia 30: 72, 73, & 119 (1975) and 31: 382 & 383. 1975.

Cleef describes this species as "hierba arrosetada" or "planta arrosetada abundante, flores blancas" and encountered it on "subpáramo: vertiente seco pedregoso con Espeletia muiska, Calamagrostis effusa y Hypericum" and "subpáramo rocoso, muy seco, con Arcytophyllum nitidum, Gaultheria rigida y gramíneas", at altitudes of 3160–3500 m., flowering and fruiting in May.

Additional citations: COLOMBIA: Boyacá: Cleef 9839 (Ld). Cundinamarca: Gleef 3900 (Ac).

PAEPALANTHUS ANDICOLA var. VILLOSUS Moldenke

Additional bibliography: Moldenke, Phytologia 25: 147–148 (1973) and 30: 119. 1975.

Fig. 1. Paepalanthus andicola var. villosus growing among Espeletia grandiflora (sens. lat.) on the Páramo de Palacio, Cundinamarca, Colombia; represented by Cleef 3808; altitude 3360 meters. Photograph by courtesy of Antoine Cleef, taken in May, 1972.

Cleef describes this plant as "hierba arrosetada" or "planta arrosetada muy común, flores blancas" and found it growing in "rasstrojo de Arcytophyllum nitidum, Aragoa cupressina y Diplostephium phyllicoides, asociado con Calamagrostis effusa en el límite páramo prop. dicho y subpáramo", "morrena secta (relat.) pedregosa con

Hypericum sp., Chusquea, Oreobolus obtusangulus, Cortaderia y Racocarpus humboldtii", and "páramo seco con frailejonal denso de Espeletia grandiflora, asociado con Paepalanthus colombianus, Campanulopsis y Lepidozolia", at altitudes of 3290—3460 meters, flowering and fruiting in April and May.

Additional citations: COLOMBIA: Boyacá: Cleef 9337 (Ld, Z). Cundinamarca: Cleef 2800 (Ut—316653), 3803 (Ac).

PAEPALANTHUS ARGENTEUS (Bong.) Körn.

Additional bibliography: Moldenke, Phytologia 29: 296 (1974) and 30: 60. 1975.

Additional citations: BRAZIL: Minas Gerais: W. R. Anderson 8566 (N).

PAEPALANTHUS ARGYROPUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresber. 46 (2): 4. 1924; Moldenke, Phytologia 26: 47, 232, & 469. 1973.

PAEPALANTHUS ASPER Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresber. 46 (2): 5. 1924; Moldenke, Phytologia 29: 297. 1974.

PAEPALANTHUS ATROVAGINATUS Ruhl.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresber. 46 (2): 4. 1924; Moldenke, Phytologia 26: 136 (1973) and 30: 43 & 97. 1975.

PAEPALANTHUS AUREUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresber. 46 (2): 5. 1924; Moldenke, Phytologia 26: 136. 1973.

PAEPALANTHUS AUYANTEPUIENSIS Moldenke

Additional bibliography: Moldenke, Phytologia 29: 297. 1974.

Bogner encountered this plant at 2400 meters altitude, flowering and fruiting in February.

Additional citations: VENEZUELA: Bolívar: Bogner 996 (Mu).

PAEPALANTHUS BALANSAE Ruhl.

Additional bibliography: Moldenke, Phytologia 26: 469. 1973.

Additional citations: PARAGUAY: Schinini 5820 (N).

PAEPALANTHUS BARAUNENSIS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 26: 136. 1973.

Anderson encountered this plant in wet sand in open places in

a region of hillsides with blocky quartzite outcrops sloping down to streams, with cerrado on the hillsides, gallery forest along the streams, and brejo (sedge meadow) just above the forest. He describes the plant as having "trailing stems" and found it in flower and fruit in April.

Additional citations: BRAZIL: Minas Gerais: W. R. Anderson 8939 (Ld, N); Irwin, Fonséca, Souza, Reis dos Santos, & Ramos 28209 (W-2759004).

PAEPALANTHUS BARBIGER Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresber. 46 (2): 4. 1924; Moldenke, Phytologia 29: 297. 1974.

Hatschbach and his associates have encountered this plant in sandy soil on "encosta de morro", flowering in October.

Additional citations: BRAZIL: Minas Gerais: Hatschbach & Ferreira 35303 (Ld); Hatschbach & Koczicki 35348 (Ld).

PAEPALANTHUS BARBULATUS Herzog

Additional bibliography: Moldenke, Phytologia 29: 297 (1974) and 30: 45. 1975.

Hatschbach & Ferreira encountered this plant on "campo pedregoso encosta de morro", flowering in October.

Additional citations: BRAZIL: Minas Gerais: Hatschbach & Ferreira 35310 (Ld).

PAEPALANTHUS BELIZENSIS Moldenke

Additional bibliography: Moldenke, Biol. Abstr. 57: 3780. 1974; Moldenke, Phytologia 29: 298. 1974.

PAEPALANTHUS BIFIDUS (Schrad.) Kunth

Additional bibliography: Soukup, Biota 2: 302. 1959; Moldenke, Phytologia 29: 298-299, 317-319, 323, & 328 (1974), 30: 34, 37, 85, & 110 (1975), and 31: 382, 383, 385, 397, 398, & 404. 1975.

Lindeman encountered this species on a large sand savanna.

The Swallen 4555 and Tavares 835 & 1070, distributed as and previously cited by me as typical P. bifidus, seem better placed as f. brevipes Moldenke, while J. S. de la Cruz 3435 and Maguire & Fanshawe 22974 are mixtures of typical P. bifidus and f. brevipes.

Additional citations: GUYANA: J. S. de la Cruz 3435, in part (D-603773, N); Maguire & Fanshawe 22974, in part (N, W-1907814), 23561, in part (N, W-1907831). SURINAM: Lindeman 4019 (N, W-2734382). PAEPALANTHUS BOMBACINUS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 29: 300. 1974.

Additional citations: BRAZIL: Minas Gerais: W. R. Anderson 8587 (N).

PAEPALANTHUS BONGARDI Kunth

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenhavn. 23: 313. 1871; Moldenke, Phytologia 29: 300 & 328 (1974) and 30: 20, 83, 338, & 339. 1975.

Material of this species has been misidentified and distributed in some herbaria as P. flaccidus (Bong.) Kunth and P. chrysophorus Alv. Silv.

Additional citations: BRAZIL: Minas Gerais: Mello Barreto 6338 (N).

PAEPALANTHUS BRITTONI Moldenke

Additional bibliography: León & Alain, Fl. Cuba, imp. 2, 1: 282, 283, & 428, fig. 113. 1974; Moldenke, Phytologia 29: 300 (1974) and 30: 88 & 328. 1975.

Additional illustrations: León & Alain, Fl. Cuba, imp. 2, 1: 282, fig. 113. 1974.

PAEPALANTHUS BROMELIOIDES Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahressber. 46 (2): 4. 1924; Moldenke, Phytologia 29: 300-301 & 306 (1974) and 30: 40, 78, & 267. 1975.

The Tryons encountered this species in "Grassland and sedgeland (with shrubby areas) with sandstone and quartzite rocks and derived soils".

Additional citations: BRAZIL: Minas Gerais: Tryon & Tryon 2823 (Mi, N, N).

PAEPALANTHUS BRYOIDES (Riedel) Kunth

Additional bibliography: Moldenke, Phytologia 29: 301 & 317 (1974) and 30: 83 & 118. 1975.

Additional citations: BRAZIL: Minas Gerais: W. R. Anderson 8471 (N); Irwin, Fonséca, Souza, Reis dos Santos, & Ramos 28578 (W-2759006).

PAEPALANTHUS CALDENSIS Malme

Additional bibliography: Moldenke, Phytologia 29: 301--320 & 492 (1974) and 30: 95 & 107. 1975.

Kummrow encountered this plant in brejo (sedge meadow), flowering in October, and describes the flowers as white. Malme (1901), whose work is sometimes erroneously cited as "1903", comments: "Celeberr Koernicke, qui specimen (unicum) Widgrenianum vidit, novam esse speciem declaravit: 'Scheint neu zu sein. In der Nähe von Paep. neglectus'. Ne vera affinis P. neglecto Koern., abs quo foliis vaginisque glabris, bracteis involucrantibus stramineis, bracteis flores suffulcentibus segmentisque perigonii exterioris obtusissimis recedit."

Additional citations: BRAZIL: Paraná: Kummrow 690 (Ld).

PAEPALANTHUS CALVUS Körn.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Nat-urh. Foren. Kjöbenhavn. 23: 313. 1871; Moldenke, Phytologia 29: 302 (1974) and 30: 81 & 89. 1975.

Körnicke (1871) cites Warming s.n. from "In monte Serra da Piedade a medio usque ad cacumen haud infreenter, Jan.--Febr. florens" and gives a detailed description of the plant.

PAEPALANTHUS CAMPTOPHYLLUS Ruhl.

Additional bibliography: Moldenke, Phytologia 26: 142--143 (1973) and 30: 83. 1975.

Emygdio and his associates encountered this plant in shady places at 1700 m. altitude, flowering and fruiting in July, and describe the flowers as white.

Additional citations: BRAZIL: Minas Gerais: Emygdio, Duarte, Becker, & Silva Santos 3547 (N).

PAEPALANTHUS CANDIDUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresber. 46 (2): 4. 1924; Moldenke, Phytologia 26: 143 & 477. 1973.

PAEPALANTHUS CANESCENS var. ATRATUS Moldenke

Additional bibliography: Moldenke, Phytologia 29: 302 (1974) and 31: 385. 1975.

Additional citations: BRAZIL: Goiás: W. R. Anderson 6636 (N-isotype).

PAEPALANTHUS CAPANEMAE Alv. Silv.

Additional bibliography: Wangerin in Just, Bot. Jahresber. 46 (1): 402. 1925; Moldenke, Phytologia 29: 302 (1974) and 30: 113.

1975.

Hatschbach and his associates encountered this plant on wet sandy campos.

Additional citations: BRAZIL: Goiás: Hatschbach, Anderson, Barneby, & Gates 36337 (Ld).

PAEPALANTHUS CAPILLACEUS Klotzsch

Additional bibliography: Moldenke, Phytologia 29: 302—303 & 321 (1974) and 31: 385 & 404. 1975.

Moore and his associates found this plant growing "submerged in savanna streams", flowering and fruiting in August.

Additional citations: VENEZUELA: Bolívar: Moore, Ambrose, Dietz, & Pfister 9836 (W--2751668).

PAEPALANTHUS CAPILLACEUS var. PROLIFERUS Gleason

Additional bibliography: Moldenke, Phytologia 26: 189—190 (1973) and 29: 321. 1974.

Ruiz-Terán & López-Palacios describe this plant as "Hierba sumergida, enraizada en lajas. Hojas filiformes, 15—20 cm. de largo, verde intensas. Escapos floríferos cilíndricos, erectos, blancos. Escapos fructíferos verde intensos, de ± 20 cm. de largo. Capítulos floríferos pequeños, globosos, con brácteas parduscas" and found it growing at 1100—1200 meters altitude, flowering and fruiting in July.

Additional citations: VENEZUELA: Bolívar: Ruiz-Terán & López-Palacios 11286 (Mi).

PAEPALANTHUS CAPILLIFOLIUS Moldenke, Phytologia 32: 484 & 485, fig. 1. 1976.

Synonymy: Syngonanthus capillifolius Moldenke, in herb.

Bibliography: Moldenke, Phytologia 32: 484 & 485, fig. 1. 1976.

Illustrations: Moldenke, Phytologia 32: 484, fig. 1. 1976.

PAEPALANTHUS CATHARINAE Ruhl.

Additional bibliography: Moldenke, Phytologia 29: 304 (1974) and 30: 94. 1975.

Hatschbach found this plant growing near a stream on campo, in "solo brejoso".

Additional citations: BRAZIL: Paraná: Hatschbach 35441 (Ld).

PAEPALANTHUS CEPHALOTRICHUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahressber. 46 (2): 4. 1924; Moldenke, Phytologia 26: 196. 1973.

PAEPALANTHUS CHIQUITENSIS Herzog

Synonymy: Paepalanthus speciosus var. boliviensis Moldenke, Phytologia 28: 467. 1974.

Additional bibliography: Moldenke, Phytologia 28: 440 & 467 (1974), 29: 305 (1974), and 31: 387 & 405. 1975.

The type collection of P. speciosus var. boliviensis is the Kuntze s.n. cited below. It is very possible that further study may indicate that what is now passing as P. chiquitensis ought to be given no more than varietal rank. Certainly it is very closely related to P. speciosus (Bong.) Körn. It has been collected at altitudes of 200–900 meters, flowering in May and July, and fruiting in July.

Material of P. chiquitensis has been misidentified and distributed in some herbaria as P. speciosus (Bong.) Körn. and Dupatya speciosa (Bong.) Kuntze. On the other hand, the Cutler 7038, distributed as P. chiquitensis, is actually P. manicatus var. pulvinatus Herzog.

Additional citations: BOLIVIA: Santa Cruz: Kuntze s.n. [200 m. Velasco. VII.92] (N, W-701893).

PAEPALANTHUS CHLOROCEPHALUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresser. 46 (2): 5. 1924; Moldenke, Phytologia 26: 198. 1973.

PAEPALANTHUS CHRYSOPHORUS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 29: 305 & 329. 1974.

The following collections, previously identified and cited by me in an earlier installment of these notes as P. chrysophorus have proved, on re-examination, actually to be P. flaccidus (Bong.) Kunth: Duarte & Graziela Barreros 7875 [Herb. Brad. 27774], G. Gardner 5244, Godoy s.n. [Herb. Inst. Bot. S. Paulo 8431], Irwin, Fonsêca, Souza, Reis dos Santos, & Ramos 28576, Irwin, Harley, & Onishi 29543, Irwin, Reis dos Santos, Souza, & Fonsêca 21958, Macedo 2780 & 3019, Mello Barreto 9844 [Herb. Jard. Bot. Belo Horiz. 25340], and Mendes Magalhães 1120 [Herb. Jard. Bot. Belo Horiz. 39318], while Mello Barreto 6338 is P. bongardi Kunth.

Anderson has collected what seems to be the true P. chrysophorus in sandy soil of brejo (sedge meadow) in an area of gallery forest, adjacent brejo, and drier higher slopes with grassy campo or rocky cerrado, at 1230 meters altitude, flowering and fruiting in May, and describes it as an herb with white flower-heads.

PAEPALANTHUS CILIOLATUS Ruhl.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahresser. 46 (2): 4. 1924; Moldenke, Phytologia 29: 305. 1974.

PAEPALANTHUS CLAUSSENIANUS Körn.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 310. 1871; Moldenke, Phytologia 29: 305 & 497 (1974), 30: 273, 275, & 332 (1975), and 31: 392. 1975.

Körnicke (1871) cites Warming s.n. from "In campis ad Lagoa San-

ta, Nov., Dec., Febrero--Junio. Crescit in primis in collibus camporum, in declivibus graminosis ('barancas'), mense Junio vulgarissime florens".

Additional citations: BRAZIL: Distrito Federal: Hatschbach 36990 (Ld); Irwin & Soderstrom 5126 (W-2759044), 5760 (W-2759046); Irwin, Souza, & Reis dos Santos 8025 (W-2759045). Goiás: W. R. Anderson 10397 (N); Macedo 3688 (S). Minas Gerais: W. R. Anderson 8641 (N).

PAEPALANTHUS COLUMBIENSIS Ruhl.

Additional & emended synonymy: Paepalanthus columbianus Ruhl. ex Pittier, Man. Pl. Usuel. Venez. 344 & 441. 1926. Paepalanthus columbianus Cleef, in herb.

Additional bibliography: Pittier, Man. Pl. Usuel. Venez. 344 & 441. 1926; Moldenke, Phytologia 30: 72--73 (1975) and 31: 382. 1975.

López-Palacios describes this as a "Planta arrosetada; hojas glabras; cabezuelas blanquecinas" and found it in flower in June. Ruiz-Terán refers to it as an "Hierba rosulada, ± 20 cm. de largo, incluyendo la inflorescencia. Hojas deltado-lineares o deltado-sub lanceoladas, laxipubescentes en ambas caras, ciliadas, mucronado espinascente en el ápice, 5--8 cm. x 8--10 mm. Capítulos subglobosos, 10--12 mm. de diámetro. Flores blancas a blanco grisáceas."

Cleef encountered it on a "subpáramo seco pedregoso con Espelletia garciae, Axonopus affinis y Maxillaria aurea var. gigantea, asociada con Hypericum", "vertiente húmedo con Calamagrostis effusa, Chusquea, Espeletia grandiflora, Hypericum y Oreobolus obtusangulus", and "subpáramo: vertiente seco muy pedregoso con rastrojo de Arcytophyllum nitidum y Gaylussacia buxifolia, asociado con Espeletia glandulosa y Cladonia spp.", and describes it as a "planta arrosetada" or "hierba arrosetada, tallo 50 cm., flores blancas, muy común". He encountered it at 2825--3300 m. altitude, flowering and fruiting in May.

Additional citations: COLOMBIA: Antioquia: López-Palacios 3581 (Ld). Boyacá: Cleef 9741 (Ac). Cundinamarca: Cleef 3394 (U-316652). Santander: Cleef, García B., & Jaramillo M. 3526 (Ld). VENEZUELA: Apure: Ruiz-Terán & López-Figueiras 8823 (Ld).

PAEPALANTHUS COMANS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 29: 312. 1974.

Additional citations: BRAZIL: Goiás: Hatschbach 36837 (Ld); Irwin, Souza, & Reis dos Santos 9494 (W-2759050).

PAEPALANTHUS FALCIFOLIUS Körn.

Additional bibliography: Moldenke, Phytologia 29: 313-314 (1974), 30: 115 & 332 (1975), and 31: 385 & 397. 1975.

Harley and his associates refer to this plant as having white flowers and have found it growing in an area of cerrado, damp grassland, and streams, at 1200 meters altitude, in flower in January.

Additional citations: BRAZIL: Bahia: Harley, Renvoize, Erskine, Brighton, & Pinheiro in Harley 15633 (Ld). Minas Gerais: Irwin, Reis dos Santos, Souza, & Fonscêca 23356 (W-2759049).

PAEPALANTHUS FASCICULATUS (Rottb.) Kunth

Additional bibliography: Moldenke, Phytologia 29: 298, 299, & 315-324 (1974), 30: 32, 35, 83, 92, 118, 317, 318, & 330 (1975), and 31: 383. 1975.

Ribeiro refers to this plant as "planta rasteira; flor marrón".

Additional citations: COLOMBIA: Meta: Chaparro, Díaz, & Morales 017 (N). BRAZIL: Amazonas: Ribeiro 15302 [729] (Ld).

PAEPALANTHUS FASCICULATUS f. SPHAEROCEPHALUS Herzog

Additional bibliography: Moldenke, Phytologia 29: 319 & 322-324 (1974) and 31: 383. 1975.

Ruiz-Terán & López-Palacios describe this plant as an "Hierba erecta, caulescente, 8-15 cm. Inflorescencias axilares, largamente pedunculadas, acumuladas hacia el extremo del tallo, formando conjunto corimboide, distal. Capítulos pequeños, globosos, pardúsculos. Heliófila, común en cauces arenosos, secos."

Additional citations: VENEZUELA: Bolívar: Ruiz-Terán & López-Palacios 10939 (Mi).

PAEPALANTHUS FASCICULIFER var. CAPILLIFOLIUS Moldenke, Phytologia 32: 336. 1975.

Bibliography: Moldenke, Phytologia 32: 336. 1975.

Citations: BRAZIL: Goiás: Hatschbach 36839 (Z-type).

PAEPALANTHUS FLACCIDUS (Bong.) Kunth

Additional synonymy: Paepalanthus flaccidus var. juniperinus Kunth apud Malme, Bih. Svensk Vet.-Akad. Handl. 27 (3), no. 11: 27, in obs. 1901.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjøbenh. 23: 310. 1871; Moldenke, Phytologia 29: 327--329. 1974.

Körnicke (1871) cites Lund s.n. from "In paludibus, S. Carlos prov. S. Paulo, m. Aprili", which, he says, belongs to his var. f with pilose sheaths. Malme (1901), whose work is sometimes erroneously cited as "1903", cites Regnell III.1264 from Minas Gerais and notes that "Specimina reportata ad var. juniperinum Kunth pertinent".

Recent collectors describe this plant as a slender, ascending herb, the stems 15--20 cm. tall, the inflorescences to 40 cm. tall, and the heads white. They have found it growing on wet campos, in brejo (sedge meadows), and in wet places in general, as well as along small watercourses, at altitudes of 1300--1600 meters, flowering from November to March and in May, and in fruit in January and November. Mendes Magalhães comments that he found only a "few" plants. Irwin and his associates encountered the plant in shaded meadows bordering gallery forest in an area of grassy meadows and adjacent sandy campos, in brejo in an area of cerrado on outcrops, brejo, and gallery forest, and in wet places in an area of cutover gallery forest in a deep valley at the base of a mountain peak.

Material of this species has been abundantly misidentified and distributed in herbaria, and even cited by me in a previous installment of these notes, as P. chrysophorus Alv. Silv., a closely similar species. On the other hand, the Mello Barreto 6338, distributed as P. flaccidus, seems to be P. bongardii Kunth instead.

Venez. 1: 223. 1966; Moldenke, Fifth Summ. 1: 118 & 126 (1971) and 2: 958. 1971; Moldenke, Phytologia 31: 381 (1975) and 32: 47. 1975.

Recent collectors describe this plant as a densely tufted herb to 2 cm. tall or prostrate mat, the inflorescence white, the actual flowers very pale brownish-white. They have found it growing on savannas, páramos or high páramos, on lakesides or near alpine lakes, at altitudes of 3165—4300 meters, in flower in January, February, April, June, July, and September, and in fruit in January, February, June, and September. Ruiz-Terán and his associates describe it as a "Hierba mínima, diminuta, rizomatíca,

cespitososa, 2-5 cm., que forma cojines cespitosos, subhemisféricos, compactos, voluminosos, de contorno más o menos circular y de 8-20 cm. de diámetro" or "agrupada en almohadillas compactas, subconvexas, semihemisféricos. Hojas pequeñas, deltado-lineares, rosuladas, denticuladas, ciliadas, con vaina blanca y limbo verde subintenso, deltado-lanceolado, agudo [or "vaina blanquecina, pilosa, limbo verde intenso, agudo, laxipiloso"]. Escapos cortos, inclusos, más cortos que las hojas, 1-céfalos. Capítulos floríferos pequeños, escapíferos, a nivel de las hojas, inclusos o sosaliendo muy poco, compactos, 4-5 mm. de diámetro, solitarios, apenas, subglobosos a hemisféricos, blanquecinos, hacia el centro de la roseta" [or " $\pm 4 \times 6$ mm."]. "Flores muy pequeños, blanquecinas" [or "mórimas, blancas"]. "Pelos periánticos blancos." They speak of the variety as "Abundante" or "Frecuente".

Cleef describes the plant as "planta arrosetada, flor blanca" and encountered it in "páramo propiamente dicho, vertiente..... sobre una llanura pequeño, vegetación seca con Calamagrostis effusa, Carex sp. y Campylopus sp.", "páramo: pantano con bosque enano de Diplostethium revolutum con Sphagnum spp. y Riccardia sp.", "páramo poco húmedo con Calamagrostis effusa, Espeletia grandiflora, Rhynchospora y Campylopus", and "vertiente pantanoso con Chusquea, Espeletia summapacis, Alchemilla cf. nivalis y Festuca dolichophylla, con muchas especies".

Cleef 3290 is a mixture with typical P. karstenii Ruhl.

Material of this variety has been misidentified and distributed in some herbaria as P. karstenii Ruhl. or P. pilosus (H.B.K.) Kunth.

PAEPALANTHUS KLOTZSCHIANUS Körn.

Additional synonymy: Paepalanthus klotzschianus Mart. apud J. Hutchinson, Fam. Flow. Pl., ed. 3, [711]. 1973.

Additional & emended bibliography: J. Hutchinson, Fam. Flow. Pl., ed. 1, 2: 66 & 67, fig. 21 (1934) and ed. 2, 2: [575], fig. 364. 1959; Moldenke, Phytologia 30: 30-31 (1975) and 31: 404. 1975.

Additional & emended illustrations: J. Hutchinson, Fam. Flow. Pl., ed. 1, 2: 66, fig. 21 (1934) and ed. 2, 2: [575], fig. 364. 1959.

PAEPALANTHUS KUPPERI Suesseng.

Additional bibliography: Moldenke, Phytologia 30: 26 & 31—32 (1975), 31: 379 (1975), and 32: 500. 1976.

The Taylors encountered this plant on a "false páramo", flowering in August. Other collectors have encountered it in dense mats in bogs in the páramo region and forming broad dense cushions, "common" on páramos at altitudes of 2700—3100 meters, flowering and fruiting from December to February. The Standley & Valerio 43637 & 43830 and Williams, Jiménez M., & Williams 24472, cited below, were previously erroneously distributed and cited by me as Eriocaulon microcephalum H.B.K., which they greatly resemble in habit and appearance.

Additional citations: COSTA RICA: Cartago: Williams, Jiménez M., & Williams 24472 (W—2436800). San José: Standley & Valerio 43637 (W—599294, W—1253340), 43830 (W—716227, W—1253393); Taylor & Taylor 11738 (W—2733969).

PAEPALANTHUS LAMARCKII Kunth

Additional bibliography: H. Lecomte, Bull. Soc. Bot. France 55: 595. 1909; León & Alain, Fl. Cuba, imp. 2, 1: 283 & 428. 1974; Moldenke, Phytologia 30: 32—38, 47, 74, 78, 81, 107, 125, 317, & 318. 1975; Molina R., Ceiba 19: 24. 1975.

The Lecomte (1909) reference in the bibliography of this species is sometimes cited as "1908", but even though the paper involved here was read at the November 13, 1908, session of the Society, pages 589—756 of Volume 55 of its Bulletin were not issued until 1909. The Malme (1901) reference is sometimes erroneously cited as "1903".

Molina R. (1975) records this species from Honduras. In Surinam Lindeman encountered it on old sand ridges in rather moist soil and near a bog, flowering and fruiting in April.

Additional citations: VENEZUELA: Bolívar: Vareschi s.n. [Canaíma, Januar 1974] (Mu). SURINAM: Lindeman 5741 (N). BRAZIL: Pernambuco: Tavares 634 (W—2692384).

PAEPALANTHUS LANCEOLATUS Körn.

Additional synonymy: Paepalanthus lanceolatus var. Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenhavn. 23: 314. 1871.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenhavn. 23: 314. 1871; Moldenke, Phytologia 30: 40, 78, & 111 (1975) and 31: 404. 1975.

Körnicke (1871) says of his unnamed variety: "Folia angustiora, quam l. c. [Mart., Fl. Bras.] a me descripta, 1 1/2 — 3 lin. lata; pedunculi plus minus pilosi demum calvi" and bases it on Warming s.n. from "In cacumine montis Serra da Piedade, Jan., Febr. fl." He apparently suffered some misgivings on his treatment of this and related species in his 1863 work, because he comments here (1871): "Species 117—125 in Mart. fl. Brasil. a me enumeratae in loco natali ulterius sunt inquirendae, utrum re vera species exhibeat, an varietates." The species here referred to

are P. corymbosus (Bong.) Kunth, P. lanceolatus Körn., P. pauciflorus Körn., P. rigidulus Mart., P. spirianus Mart., P. trichopetalus Körn., P. tuberosus (Bong.) Kunth, P. vellozzioides Körn., and P. villosulus Mart. Ruhland (1903) maintains all of these as valid species, but they are certainly all most similar in habit and general appearance and Körnicke's suggestion that some, at least, be reduced to varietal rank is one well worth following up.

Recent collectors have encountered P. lanceolatus on "campo rochoso encosta de morro", flowering in October.

PAEPALANTHUS NIGRICANS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 30: 96-97 (1975) and 31: 385. 1975.

Harley and his associates refer to this plant as a slender herb with dull-green leaves and whitish flower-heads. They encountered it in an area of carrasco scrub vegetation among rocks, with occasional wet flushes and some areas partly burned-over, at 1500 m. altitude, flowering and fruiting in January.

Additional citations: BRAZIL: Bahia: Harley, Renvoize, Erskine, Brighton, & Pinheiro in Harley 15482 (Z).

PAEPALANTHUS OBTUSIFOLIUS (Steud.) Körn.

Additional synonymy: Paepalanthus obtusifolia Körn. ex Moldenke, Phytologia 31: 404, in syn. 1975.

Additional bibliography: Moldenke, Phytologia 30: 99-100 & 317 (1975) and 31: 404. 1975.

The statement made previously by me to the effect that Blanchet 3584 is the type collection of this species is incorrect, even though Macbride photographed a sheet of this collection as his type photograph number 22292. The species is actually based on Herb. Moricand s.n.; whether this may, in fact, also be a specimen of Blanchet 3584 is not clear, but I have no evidence that it is. Ruhland (1903) apparently thought that it is not, since he regarded the Blanchet collection as representing P. tortilis (Bong.) Mart. From what I have seen of Blanchet's collection, I feel that it does, in fact, actually represent P. obtusifolius.

Harley and his associates describe P. obtusifolius as a "low herb with pale-green rosettes of leaves" and whitish-gray flower-

heads, and have found it growing in an area of woodland along a small stream, normally damp grassland (now dry), and dry cerrado/carrasco woodland on slopes of surrounding quartzite hills, at 1000 meters altitude, flowering and fruiting in January.

Additional citations: BRAZIL: Bahia: Blanchet 3584 [Macbride photos 22292] (Br, E, N--photo, W--photo); Harley, Renvoize, Brighton, & Pinheiro in Harley 15275 (Z).

PAEPALANTHUS OVATUS Körn.

Emended synonymy: Paepalanthus macaheensis Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 311-312. 1871.

Additional & emended bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 311-312. 1871; Moldenke, Phytologia 30: 104-105. 1975.

Hatschbach encountered this species in shaded sandy soil. Körnicke (1871) cites for P. ovatus an additional collection, Glaziou 4281. In his description of P. macaheensis he says that it "Differt a P. ovato Kcke. capitulis sordide flavido- (nec albo-) villosis, bracteis involucrantibus interioribus latioribus, non acuminatis; a P. neglecto Kcke. et P. Schuchiano Kcke. pilositate foliorum nec non bracteis; a P. plantagineo Kcke. proximo capitulis sordide flavidio (nec albo-) villosis et bracteis flores stipantibus multi angustioribus. In collectionibus cel. Glaziou 'n. 4284, Hailo macahe', pr. Rio de Janeiro. Ann. Suppentunt specimen in collectionibus Glaziou sub. n. 4282 verisimile formam ejusdem speciei exhibentia solo aridiori enata caule hypogaeo breviore foliis angustioribus bracteis involucrantibus acutioribus interioribus minus latis."

Additional citations: BRAZIL: Minas Gerais: Hatschbach 36547 (Ld). Rio de Janeiro: Lützelburg 6584 (Mu).

PAEPALANTHUS OXYPHYLLUS Körn.

Additional bibliography: Moldenke, Phytologia 30: 105-106 (1975) and 31: 385. 1975.

Hatschbach and his associates found this plant growing in brejo (sedge meadow), at 1300-1500 meters altitude, flowering in February.

Additional citations: BRAZIL: Goiás: Hatschbach, Anderson, Barneby, & Gates 36373 (Z).

PAEPALANTHUS PALLIDUS Alv. Silv.

Additional bibliography: Fedde & Schust. in Just, Bot. Jahressber. 46 (2): 4. 1924; Moldenke, Phytologia 30: 107-108. 1975.

PAEPALANTHUS PARAMENSIS Moldenke

Additional bibliography: Moldenke, Phytologia 30: 108-109 (1975) and 31: 381. 1975.

Cleef describes this plant as a "planta [or "hierba"] arrosetada pequeña, capítulos blancos, flores blancas" and found it growing in a "subpáramo", "rastrojo seco con Diplostethium colombianum predominante, asociada con Arcytophyllum caracasanum, Cortaderia, Oreobo-

lus obtusangulus, Hypericum y Racocarpus humboldtii", and "subpáramo: vertiente pentiente seco con Calamagrostis effusa, Espeletia corymbosa, Rhynchospora y Arcytophyllum nitidum, asociadas con matorral de Befaria", at altitudes of 3100—3725 meters, flowering and fruiting in May, June, and December.

Additional citations: COLOMBIA: Boyacá: Cleef 4742 (Ut—316636), 7205 (Ut—316643). Cundinamarca: Cleef 3335 (Ac), 3650 (Ld).

PAEPALANTHUS PAUCIFLORUS Körn.

Additional bibliography: Moldenke, Phytologia 30: 110—111. 1975.

Emygdio and his associates have encountered this plant at 1025 meters altitude, flowering in July.

Additional citations: BRAZIL: Minas Gerais: Emygdio, Duarte, Becker, & Silva Santos 3728 (N).

PAEPALANTHUS PAUPERRIMUS Herzog

Additional bibliography: Moldenke, Phytologia 30: 113—114 & 118. 1975.

The isotype of this species cited by me previously from my personal herbarium, was so cited in error.

PAEPALANTHUS PETRAEUS Körn.

Additional bibliography: Moldenke, Phytologia 30: 119. 1975.

Additional citations: COLOMBIA: Cundinamarca: Duque-Jaramillo 2814 (N).

PAEPALANTHUS PHAEOCEPHALUS Ruhl.

Additional bibliography: Moldenke, Phytologia 30: 120—121. 1975.

Hatschbach and his associates found this plant growing in a wet sandy campo at 1300—1500 meters altitude, flowering and fruiting in May.

Additional citations: BRAZIL: Goiás: W. R. Anderson 6610 (N), 7451 (N); Hatschbach 36853 (Ld); Hatschbach, Anderson, Barneby, & Gates 36363 (Ld); Irwin, Grear, Souza, & Reis dos Santos 12596 (W—2759009).

PAEPALANTHUS PHAEOCEPHALUS var. FOLIOSUS Moldenke

Additional bibliography: Moldenke, Phytologia 30: 120—121. 1975.

Additional citations: BRAZIL: Distrito Federal: Irwin, Souza, & Reis dos Santos 11368 (W—2759010—isotype).

PAEPALANTHUS PILOSUS (H.B.K.) Kunth

Additional bibliography: Moldenke, Phytologia 30: 251 & 269. 1975.

Cleef describes this plant as a "planta [or "hierba"] pequeña arrosetada, flores blancas" and encountered it on a "páramo: morrena seca (relat.) pedregoso con Hypericum sp., Chusquea, Oreobolus obtusangulus, Paepalanthus spp., Cortaderia y Racocarpus hum-

boldtii" and "turbera.....Sphagnum predominante, asociado con Ericáceas prostradas, Aragoa abietina, Puya sp. y Riccardia", at altitudes of 3290--3660 m., flowering and fruiting in April and November.

Additional citations: COLOMBIA: Boyacá: Cleef 9336 (Ld). Cundinamarca: Cleef 6230 (Ut--316646).

PAEPALANTHUS PLANIFOLIUS (Bong.) Körn.

Additional & emended bibliography: Soukup, Biota 2: 302. 1959; Moldenke, Biol. Abstr. 59: 6926. 1975; Moldenke, Phytologia 30: 252--262 & 336 (1975) and 31: 385 & 404. 1975.

Malme (1901), whose work is sometimes erroneously cited as "1903", cites Mosén 766 from "Loco uliginoso, in margine silvae", Minas Gerais, and comments that "Caulis ad 0,5 m longus, diam. ad 0,05 m., ascendens, decumbens v. erectus. Folia a basi vaginante et pallida subplana, glaucoviridia. Pedunculi compressi, striati. Inflorescentia obliqua, semiglobosa."

Additional citations: BRAZIL: Distrito Federal: Irwin, Souza, & Reis dos Santos 7902 (W--2759011).

PAEPALANTHUS PLANIFOLIUS var. CONSANGUINEUS (Körn.) Ruhl.

Additional synonymy: Paepalanthus consangvineus Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 314, sphalm. 1871. Paepalanthus consangvineus var. Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 314. 1871.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 314. 1871; Moldenke, Phytologia 30: 256 & 258--260 (1975) and 31: 385 & 404. 1975.

Körnicke's (1871) unnamed variety is described by him as "Differt a speciminibus l. c. [in Mart., Fl. Bras. 1863] a me descriptis bracteis involucrantibus glabris, subacuminatis. — Haec etiam species et affines l. c. a me sub num. 138—141 enumeratae forsitanquam varietates conjungendae sunt" and is based on Glaziou 3618 from "e vicinia Rio de Janeiro", Brazil.

PAEPALANTHUS PLANIFOLIUS var. VILLOSUS Moldenke

Additional bibliography: Moldenke, Biol. Abstr. 59: 6926. 1975; Moldenke, Phytologia 30: 262 (1975) and 31: 385. 1975.

PAEPALANTHUS PLANTAGINEUS (Bong.) Körn.

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Naturh. Foren. Kjöbenh. 23: 312 & 313. 1871; Moldenke, Phytologia 30: 262--264 (1975) and 31: 404. 1975.

Körnicke (1871) cites for his "var. ♂" of this species Glaziou 3620 from "F. do Cagado in vicinia urbis Rio de Janeiro", collected in June. He notes that his P. macaheensis [=P. ovatus Körn.] differs from P. plantagineus in "proximo capitulis sordide flavidō-(nec albo-)villoso et bracteis floris stipantibus multo angustioribus".

PAEPALANTHUS PLUMIPES Alv. Silv.

Additional bibliography: Moldenke, Phytologia 30: 266—267, 274, & 275. 1975.

Emygdio and his associates have encountered this plant growing in barren soil at 1550 meters altitude, flowering and fruiting in July, and describe the flowers as "branco-sujo".

Additional citations: BRAZIL: Minas Gerais: Emygdio, Duarte, Becker, & Silva Santos 3373 (N).

PAEPALANTHUS PLUMOSUS (Bong.) Körn.

Additional & emended bibliography: Hook. f. & Benth. in Hook., Niger Fl. 548. 1849; Moldenke, Phytologia 4: 202 & 205 (1953), 30: 267—271 (1975), and 31: 404. 1975.

PAEPALANTHUS POLYANTHUS (Bong.) Kunth

Additional bibliography: Körn. in Warming, Vidensk. Meddel. Natr. Foren. Kjöbenh. 23: 310. 1871; Moldenke, Phytologia 30: 266, 267, 271—278, & 332. 1975.

Hatschbach and his associates found this plant growing in sandy soil "junta a afloramientos". Körnicke (1871) cites an unnumbered Lund collection from "In campis arenosis Araraquara, m. Majo" and says of it "Specimina multo minora (12—19 pollicaria), quam ea in Mart. flor. Brasil. a me descripta. Praeterea ramis paucis erecto-patentibus differunt", but he still places it in what he calls his "var. 8". Malme (1901), whose work is sometimes erroneously cited as "1903", cites Löfgren 1127 from São Paulo and Regnell 1271 from Minas Gerais, collected in "Loco turfoso" and "In palude" in March and December respectively.

Additional citations: BRAZIL: Minas Gerais: Hatschbach, Anderson, Barneby, & Gates 36426 (Ld); Irwin, Fonscá, Souza, Reis dos Santos, & Ramos 27952 (W—2759012), 28345 (W—2759013). Paraná: Hatschbach 35574 (Ld).

PAEPALANTHUS POLYANTHUS f. VILLOSUS (Beauverd) Moldenke & Smith

Additional bibliography: Moldenke, Phytologia 30: 275, 277—278, & 334. 1975.

Additional citations: BRAZIL: Minas Gerais: Anderson, Stieber, & Kirkbride 35370 (W—2709307).

PAEPALANTHUS POLYTRICHOIDES Kunth

Additional & emended bibliography: Soukup, Biota 2: 302. 1959; Moldenke, Phytologia 30: 317—320. 1975.

PAEPALANTHUS POLYTRICHOIDES var. DENSUS Moldenke

Additional bibliography: Moldenke, Phytologia 30: 319. 1975.

Cleef describes this plant as a "herba [or "plantica"] arrosetada pequeña alomhadillada con flores blancas" and encountered it on a "páramo húmedo con Calamagrostis effusa, Espeletia y briófitos", "páramo húmedo, crece en macollas de gramíneas", "páramo abierto cerca de la laguna", and "páramo húmedo con Chusquea y muchísimas especies de criptógamas", at altitudes of 3650—3700 m.,

flowering and fruiting in January, August, and November.

Additional citations: COLOMBIA: Cundinamarca: Cleef 3577 (Ac), 5365 (Ld); Cleef & Jaramillo M. 50 (Ld); Florschütz 1512 (Ut—316662).

PAEPALANTHUS PULVINATUS N. E. Br.

Additional & emended bibliography: H. Lecomte, Bull. Soc. Bot. France 55: 595. 1909; Moldenke, Phytologia 30: 327—328. 1975.

The Lecomte (1909) reference to this species is sometimes erroneously cited as "1908", but even though the paper involved was read to the Society at its November 13, 1908, meeting, pages 589—756 of Volume 55 of its Bulletin, in which it was published, were not actually issued until 1909.

PAEPALANTHUS PUNGENS Griseb.

Additional bibliography: León & Alain, Fl. Cuba, imp. 2, 1: 283 & 428. 1974; Moldenke, Phytologia 30: 328 (1975) and 32: 505. 1976.

PAEPALANTHUS PUNGENS var. BREVIFOLIUS Moldenke

Additional bibliography: Moldenke, Phytologia 30: 328 (1975) and 32: 505. 1976.

Marie-Victorin encountered this plant growing in dry white siliceous sand, flowering and fruiting in March, but erroneously distributed it as Eriocaulon pseudocompressum Ruhl.

Additional citations: CUBA: Pinar del Río: Marie-Victorin 58316 (W—1955390).

PAEPALANTHUS RAMOSUS (Wikstr.) Kunth

Additional bibliography: Schnitzl., Iconogr. 1: pl. 46, fig. 4 & 7. 1845; Moldenke, Phytologia 30: 329—334 (1975) and 31: 392, 397, 403, & 404. 1975.

Emended illustrations: Schnitzl., Iconogr. 1: pl. 46, fig. 4 & 7. 1845.

Harley and his associates encountered this plant in an area of high evergreen restinga forest, in low restinga, and in damp open areas on white sand at sealevel and describes it as an "erect herb to 30 cm., shoots rosette-like at first with mid-green leaves, monocarpic, the flower-heads white". It was flowering in March. Belém & Pinheiro refer to it as 40 cm. tall, the inflorescences "arroxeadas, flores brancas" and found it in anthesis in July. Their two collections, cited below, were previously erroneously cited by me as P. coutoensis Moldenke, a closely similar species.

Additional citations: BRAZIL: Bahia: Belém & Pinheiro 2113 (N), 2485 (Ld, N); Harley, Renvoize, Erskine, Brighton, & Pinheiro in Harley 17386 (Ld).

PAEPALANTHUS REFRACTIFOLIUS Alv. Silv.

Additional bibliography: Moldenke, Phytologia 30: 335 (1975) and 31: 385. 1975.

Additional citations: BRAZIL: Bahia: Harley, Renvoize, Erskine,

Brighton, & Pinheiro in Harley 15473 (z).PAEPALANTHUS REPENS (Lam.) Körn.

Additional synonymy: Eriocaulon quinquangulare Bojer, Hort.

Maurit. 361. 1837 [not E. quinquangulare L., 1753].

Additional bibliography: Bojer, Hort. Maurit. 361. 1837; Moldenke, Phytologia 30: 337-339 (1975), 31: 380, 389, 404, & 405 (1975), and 32: 506. 1976.

Recent collectors have found this plant growing in grassy places and on mountaintops. The Howards describe it as "weak plants" and encountered it in very wet debris at the base of dripping cliffs. Ekman refers to it as "common" and as "not rare in the mountains". It has been found at altitudes of 1110-3125 meters, flowering and fruiting in March and from August to October (in addition to the months previously reported by me).

Bojer (1837) records this plant from Mauritius: "2 REPENS. Lamk. Spreng. Syst. ibid. [p. 775]. Pat. Ile Maurice. Croit et fleurit comme l'espèce précédente [what he calls Eriocaulon quinquangulare L. from "dans les endroits découverts et humides autour du Grand-Bassin"]." The identity of his plant can be determined only on examination of his collections. Five species of Eriocaulon are known from Mauritius besides these two obviously misidentified ones.

PAEPALANTHUS RIGIDULUS Mart.

Additional & emended bibliography: Schnitzl., Iconogr. 1: pl. 46, fig. 8-12. 1845; Moldenke, Phytologia 30: 343. 1975.

Emended illustrations: Schnitzl., Iconogr. 1: pl. 46, fig. 8-12 (in color). 1845.

Martius' original description (1835) ends with the statement "bracteis castaneis". The original publication is sometimes cited as "Mart., Erioc. Selbst. Pflanzenfam." and dates "1833", but this is merely the title of the paper and the date of its submission as a manuscript to the Academy. According to Dr. J. H. Barnhart it was not actually published until 1835. [to be continued]
